USG OBSTETRIC

LMP- 29/10/2022 G.A- 20 weeks 05 day EDD- 05/08/2023

A single live intrauterine foetus is seen in changing presentation.
 Normal foetal cardiac activity present. FHR-161 bpm
 Normal foetal movements are present.

FOETAL INDICES:

Placenta- **ANTERIOR**, not low lying. ✓
 Liquor- adequate amount.

Cervical length- 3.5 cm adequate ✓ internal os-closed.

Cerebral hemisphere, thalami, ventricular system, septum pellucidum, cerebellum are normal. Fetal spine and fetal face is normal. Both the kidneys are normal. Fundic bubble noted. No cystic or solid mass lesion in abdomen. Visualized long bones of all four limbs are grossly normal. four chamber view appears grossly normal at present.
 Umbilical cord is three vessel and normal.

Foetal Growth parameters:

Parameters	mm	Corresponds to	
		Weeks	Days
BPD	44 ✓	19	2
HC	162 ✓	19	0
AC	126	18	2
FL	28	18	6
HL	27	18	6

EFW: 248 +/- 10 % gram Average gestational age- 18 weeks 6 days.
 EDD by USG-As per dating scan

Average uterine artery PI is 0.90 is within normal limits for gestational age. ✓

IMPRESSION-

- A single live intrauterine foetus of average gestational age 18 weeks 6 days.
 - No gross sonographically detectable congenital anomaly seen at present.
- Follow up scan suggested at 24 weeks for evaluation of evolving anomalies and fetal echo for optimal cardiac assessment.

I Dr. Vaibhav Shah declare that while performing sonography on Mrs. pooja sonkar have not seen/disclosed sex of foetus to anybody in any manner.
 Detailed foetal anatomy may not always be visible due to technical difficulties related to foetal position, amniotic fluid volume, foetal movement and abdominal wall thickness. Hence all foetal anomalies may not necessarily be detected at every examination. Detailed foetal echocardiography is not included in this scan.
 All measurements including the estimated foetal weight are subject to statistical variation.
