SONOGRAPHY AND COLOUR DOPPLER CLINIC

DR. AJINKYA S. KOLSE

MBBS, DMRE (Mumbai)

Consultant Radiologist

Reg. No. 2011/07/2344

Patient Name: Mrs. Pooja Amrutkar Age: 25yrs/Sex Female

Ref By : Dr. Rashmi Sonar Date: 05/04/2023

OBSTETRICS SONOGRAPHY NT/NB SCAN

LMP: 10/01/2023

GA: 12 weeks 1 day

EDD: 17/10/2023

Gravid uterus shows single live fetus is in changing presentation.
Fetal cardiac activity and movements are present. FHR = 157 BPM
Liquor is adequate. ✓
Placenta forming posteriorly.
No subchorionic or retroplacental bleed at present.
Cervical length is adequate (measures 3.6cm). Internal os is closed.
Limb buds are seen to be developed.

Nasal bone is seen to be developed. ✓
Nuchal translucency (measures 1.6 mm) is normal for age.
Ductus venosus shows normal waveform on doppler study.
Both uterine arteries shows normal PI values.
No tricuspid regurgitation noted.
No adnexal pathology seen.

CRL : 55.2 mm @ 12 weeks 1 day
EDD by USG: As per Dating Scan

IMPRESSION: SINGLE LIVE INTRAUTERINE GESTATION OF 12 WEEKS 1 DAY.

ADV: Follow up USG at 18-22 weeks for Anomaly Scan.

(Note: Not all congenital anomalies can be ruled out by sonography due to present fetal position, liquor volume and fetal maturity.)
