IMPRESSION : ULTRA SOUND MORPHOLOGY SUGGEST:

- SINGLE LIVE INTRAUTERINE FETUS OF GESTATIONAL AGE 12 WEEKS 6 DAYS.

----- END -----

Suggested follow up at 19-24weeks for anomaly scan(TIFFA).

Dr. AYESHA JABEEN

MD.RADIOLOGIST.

DR. GANGADHAR. CH,
DMRD (Osm), DNB(NIMS).,
RADIOLOGIST.

- Note:** 1. The science of the radiological Diagnosis is based on the interpretation of various shadows/densities produced by both the normal and abnormal tissue. Dissimilar diverse diseases produce similar shadows, hence this report represents only some of the various possibilities and a number of variables known and unknown does exist. Hence this report has limitations and is not valid for medico-legal purposes.
2. Suggested clinical correlation, discuss if required.
