Risk			Trisomy 21
1:10			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.
1:100			After the result of the Trisomy 21 test (with NT) it is expected that among 1804 women with the same data, there is one woman with a trisomy 21 pregnancy and 1803 women with not affected pregnancies.
1:250			The PAPP-A level is low.
1:1000			The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.
