

Prisca

5.1.0.17

Date of report:

07-05-2023

Patient data				
Name	Mrs. VINIA RAGHUWANSHI		Patient ID	0382305050079
Birthday	04-05-1990		Sample ID	23933697
Age at sample date	33.0		Sample Date	05-05-2023
Gestational age	12 + 1			
Correction factors				
Fetuses	1	IVF	no	Previous trisomy 21 pregnancies
Weight	45	diabetes	no	
Smoker	no	Origin	African	
Biochemical data			Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age	11 + 2
PAPP-A	2.39 mIU/mL	0.38	Method	CRL Robinson
fb-hCG	43.88 ng/mL	0.74	Scan date	29-04-2023
Risks at sampling date			Crown rump length in mm	47.2
Age risk	1:401		Nuchal translucency MoM	0.62
Biochemical T21 risk	1:407		Nasal bone	present
Combined trisomy 21 risk	1:2507		Sonographer	NA
Trisomy 13/18 + NT	<1:10000		Qualifications in measuring NT	MD
Risk			Trisomy 21	
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 2507 women with the same data, there is one woman with a trisomy 21 pregnancy and 2506 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT				
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
