Ex. Consultant Radiologist Aakash Health Care, New Delhi

Ex. Visiting Consultant Kailash Hospital, New Delhi

Reg. No. MP-18867

Reg. No. : CL/3492/JUL-2021

PATIENT: MRS. NEHA MENGROLE

REF DOCTOR: DR. NAMITA DALELA

AGE: 31 Y/F

DATE: 8/5/2023

ULTRASOUND NT / NB SCAN

Last Menstrual Period

3/2/2023

Gestational Age by LMP

13 Weeks 3 Days

Scan show anteverted uterus containing single gestational sac with single live fetus, showing normal fetal movements.

Fetal cardiac activity is seen with FHR 152 BPM.

Fetal choroid plexus, spine, cranium ossification, stomach bubble, 3 vessel cord, cord insertion, limbs, UB appear normal.

Placenta is forming posteriorly.

Parameters				
Nasal bone	2.7	mm		
Nuchal Thickness	1.2	mm		
		Measurement	Gestational Age	
		Units	Weeks	Days
Crown Rump Length	77.8	mm	13	6

On Doppler ultrasound the flow in the ductus venosus has a characteristic triphasic waveform with flow in the forward direction.

Both the adnexa are clear.

Cervix measures 3.6 cm in length. Internal os is closed.

EDD by CGA: 7/11/2023

Right uterine artery PI 0.84, RI 0.54, S/D 2.16

Left uterine artery PI 1.54, RI 0.72, S/D 3.59

Mean PI-1.19

IMPRESSION: SINGLE LIVE INTRAUTERINE FETUS OF 13 WEEKS 6 DAYS.

Kindly correlate clinically

This is not an anomaly scan. Not all congenital anomalies are possible to rule out due to various fetal presentation, movements etc. Detailed genetic screening, biochemical studies, fetal echocardiography and 4D sonography are indicated in case of high clinical suspicion.

I Dr. VIGNESH (name of person conducting the ultrasonography/image scanning) declare that while conducting ultrasonography/image scanning on Mrs. NEHA have neither detected nor disclosed the sex of her fetus to anybody in any manner.

DR. VIGNESH
