

Patient data			
Name Mrs. GAYATHRI W/O SAJAN VARMA TWIN B		Patient ID 0012305090086	
Birthday 26-06-1995		Sample ID 24179265	
Age at sample date 27.9		Sample Date 09-05-2023	
Gestational age 13 + 3			
Correction factors			
Fetuses 2	IVF no	Previous trisomy 21 pregnancies unknown	
Weight 40	diabetes no		
Smoker no	Origin Asian		
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age 11 + 6
PAPP-A	13.21 mIU/mL	0.80	Method CRL Robinson
fb-hCG	40.65 ng/mL	0.49	Scan date 28-04-2023
Risks at sampling date			Crown rump length in mm 55
Age risk 1:829			Nuchal translucency MoM 0.62
Biochemical T21 risk <1:10000			Nasal bone unknown
Combined trisomy 21 risk <1:10000			Sonographer NA
Trisomy 13/18 + NT <1:10000			Qualifications in measuring NT MD
Risk			Trisomy 21
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The risk for this twin pregnancy has been calculated for a singleton pregnancy with corrected MoMs. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
