

Patient data			
Name	Mrs. B.BALLAXMI		Patient ID
Birthday	10-12-1997		Sample ID
Age at sample date	25.4		Sample Date
Gestational age	13 + 1		
Correction factors			
Fetuses	1	IVF	no
Weight	35	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	4.21 mIU/mL	0.45	13 + 1
fb-hCG	39.54 ng/mL	0.90	Method
			CRL Robinson
			Scan date
			18-05-2023
Risks at sampling date			Crown rump length in mm
Age risk			71.03
Biochemical T21 risk			Nuchal translucency MoM
1:1110			1.24
Combined trisomy 21 risk			Nasal bone
1:2387			unknown
Trisomy 13/18 + NT			Sonographer
<1:10000			NA
			Qualifications in measuring NT
			MD
Risk		Trisomy 21	
		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 2387 women with the same data, there is one woman with a trisomy 21 pregnancy and 2386 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
