DEPARTMENT OF RADIOLOGY AND IMAGING SCIENCES
ULTRASOUND NUCHAL TRANSLUCENCY

Single live intrauterine foetus is seen in variable presentation at the time of scan.

Good cardiac activity is seen. F.H.R : 149 bpm.

CRL : 8.00 cms corresponding to 14 weeks 00 days

B.P.D : 2.82 cms corresponding to 15 weeks 00 days

Placenta : Posterior, high, grade 0

Cervical length : 3.1 cm. Internal OS is closed.

Scan EDD : 17/11/2023

DOB:- 1-1-1999.
Weight:- 45 kg

Aneuploidy markers: -

- Nuchal translucency - 1.86 mm (within normal limits).
- Nasal bone ossification - visualised.
- Ductus venosus flow - normal (PI - 0.69).
- No tricuspid regurgitation.

Fetal anatomical survey:

- Intracranial translucency IT - 2.16 mm
- Retronasal triangle - normal.
- Mandibular gap is normal.
- Skull/ brain appears normal.
- Fetal stomach bubble seen.
- Both hands and feet visible.
- Bladder is visible.
- Bowel echogenicity is normal.
- 3 vessel cord seen with normal cord inserion.

Bilateral uterine arteries show normal mean PI of 0.96 (4th centile).
