# GANDHI SONOGRAPHY AND COLOR DOPPLER CLINIC

(A Unit of Gandhi Nursing Home)

• SONOGRAPHY • COLOR-DOPPLER • 3D / 4D

**Mrs. Sarika Badwe**

28.04.2023

Dr. Mrs. Anita Darda  
M.B.B.S., D.G.O

**ULTRASOUND EXAMINATION DURING PREGNANCY( NT SCAN) :-**  
(Performed on Accuvix XG Colour-Doppler Machine.)

There is a single intrauterine live foetus with changing presentation.

B.P.D. is 1.79 cms. & Femoral length is 0.81 cms. & C.R.L. is 5.24 cms.  
Averaging these parameters the gestational age is about 12 weeks 2 days  
 $\pm 7$  days & projected date of delivery is 08.11.2023

Foetal heart rate is 155 beats per minute & regular.

Foetal body and limb movements are normal.

Placenta is forming in upper segment and on posterior wall. It shows grade 0 maturity.

Amniotic fluid volume is adequate for the period of gestation.

Foetal spine, skull, thorax, abdomen & visualised limbs do not show any demonstrable anomaly at present in level I sonography.

*N.T. is 1mm. Nasal bones are well formed. Ductus venosus shows normal flow pattern.*

Length of cervix (3.4 cm) is adequate & internal os is closed.

**OPINION :-**

Single intrauterine live foetus with changing presentation.

Gestational age is about 12 weeks and 2 days  $\pm 7$  days.

Placenta is forming in upper segment & amniotic fluid volume is adequate.

Clinical correlation & follow-up is suggested.

I declare that while conducting ultrasonography/image scanning on this patient  
I have neither detected nor disclosed the sex of her foetus to any body in any manner.
