OBSTETRIC SONOGRAPHY (NT, NB SCAN.)

LMP: 23.2.2023 - 14.1 WKS.

SPD	22.6 mm	13.5 WKS
FL	87 mm	12.4 WKS
CRL	59.3 mm	12.3 WKS
AC	1.8 mm	

Nasal bone seen, approximate length is 3.6 mm.

- Single live intrauterine fetus is seen in unstable presentation at the time of examination.
- Fetal cardio activity is noted.
- Normal fetal muscular movements noted.
- Amniotic fluid is normal for the period of gestation.
- Fetal stomach and visualized spine appears normal.
- Placenta is **anterior** and situated in **upper** segment.
- Placenta shows **Gr 0** maturity.

It is not possible to visualize entire fetus/ all fetal parts on routine scan, hence possibility of missing out congenital anomaly/ies will always remain there. This scan does not include evaluation of cardiac status and anomaly also. Possibility of missing out multiple pregnancies at any stage of gestational period remains there.

OPINION - SINGLE LIVE INTRAUTERINE FETUS OF AVERAGE MATURITY OF 12 WEEKS 6 DAYS $\pm$ 1.5 WKS.
Ductus venosus show slightly deep A wave.
Kindly correlate with blood marker reports.
ADV - TARGET SCAN & FETAL ECHO.
