Report Date : 10/06/2023 12:50:57

NT SCAN

FINDINGS:

LMP : 03-03-2023
GA by LMP : 14 weeks 1 days
EDD by LMP : 08-12-2023

Evidence of single intrauterine fetus with good cardiac activity.

No perigestational collection.

CRL Measures : 8.47 cms corresponding to 14 weeks 3 day

Fetal heart rate : 152 bpm

G.A. by USG : 14 weeks 1 day

Scan EDD : 07-12-2023

Placental : Anterior midsegment, Grade 0

Nuchal fold measures 1.2 mm.

Nasal bone is visualized.

Cervix : 3.4 cms, Os closed. No funneling.

IMPRESSION:

Single viable intra uterine foetus of gestational age corresponding to 14 weeks 1 days
Normal nuchal translucency.

Please note:

All anomalies cannot be ruled out by this scan, since assessment of fetal anomalies depends on fetal position, liquor volume, maternal obesity and period of gestation. Hence this report has limitations and is not for medico-legal purposes. Suggested TIFFA at 18-22 weeks and foetal echocardiography at 24-28weeks.

DR SAIFULLAH MDRD
CONSULTANT RADIOLOGIST

DR RUHI ANJUM
CONSULTANT SONOLOGIST

The science of the radiological diagnosis is based on the interpretation of various shadows produced by both the normal and abnormal structure. Hence the report represents only some of the various possibilities and a number of variables, known and unknown does exist.

2. All anomalies cannot be ruled out by this scan, since assessment of fetal anomalies depends on fetal position

Note This report is not for medico-legal proposes.
