USG EARLY PREGNANCY

LMP - 16-03-2023

GA BY LMP- 11 weeks 6 days

EDD BY LMP- 31-12-2023

Real time trans-abdominal USG of pelvis shows a gravid uterus

FETUS

Survey

Single well defined intra uterine gestational sac seen with irregular margins and thick edematous decidual reaction.

The fetal pole is not seen.

Biometry (Hadlock)

Mean G sac diameter measures 13 mm -corresponding to 6 weeks and 1 day

Cervical length measures 3.3 cm. The internal OS is closed.

Thin walled anechoic cyst of size 27 x 23 mm is seen in right ovary

IMPRESSION:

- Early single intra uterine gestation of 6 weeks 1 day. G sac appears small for gestational age with irregular margins and thick decidual reaction - features are likely s/o early pregnancy failure (missed Abortion)

Suggested follow up USG after 2 weeks

I, Dr. Shoaib A Fazlani declare that while conducting ultrasonography on this patient, I have neither detected nor disclosed the sex of her fetus to anybody in any manner.
