

Patient data			
Name	Mrs. M LATHA5		Patient ID
Birthday	01-01-1987		Sample ID
Age at sample date	36.5		Sample Date
Gestational age	12 + 0		
Correction factors			
Fetuses	1	IVF	no
Weight	70	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	1.15 mIU/mL	0.44	11 + 6
fb-hCG	45.56 ng/mL	1.01	Method
			CRL Robinson
			Scan date
			19-06-2023
Risks at sampling date			Crown rump length in mm
			55
Age risk	1:190		Nuchal translucency MoM
Biochemical T21 risk	1:149		0.58
Combined trisomy 21 risk	1:923		Nasal bone
Trisomy 13/18 + NT	<1:10000		unknown
			Sonographer
			NA
			Qualifications in measuring NT
			MD
Risk			Trisomy 21
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 923 women with the same data, there is one woman with a trisomy 21 pregnancy and 922 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
