

SONOGRAPHY OF PELVIS

Name : Mrs Lubna Kausar

Date : 01/07/2023

Age/Sex : 28 Yrs / Female

Ref. By : Dr Manju Rathi Mam (MBBS, MD)

Single viable intrauterine foetus with **Changing Lie** at the time of examination.
Foetal movements and cardiac pulsations are well appreciated.

Foetal Heart Rate : 147 Beats / min

| | |
|----------------------------|--|
| LMP : 01/04/2023 | CGA (Average sonic maturity) : 11 wks 6 days. |
| EDD By LMP : 06/01/2024 | EDD By CGA : 14/01/2024 |
| GA By LMP : 13 wks 0 days. | |

| | | |
|-----|---------|-----------------|
| CRL | 5.14 cm | 11 wks 6 days . |
|-----|---------|-----------------|

The average sonic maturity of gestation corresponds with **11 wks 6 days**.
No evidence of free fluid noted in pelvis .

Following structures could be seen :

Head present, cranial bones, midline falx, choroid plexus fill ventricles.

PMT view appears normal.

Spine longitudinal.

Symmetric lung field, no effusion or masses.

Stomach appears normal in present scan.

Bladder appears normal in present scan .

Four limbs each with three segments , hands & feet with normal orientation.

Four chamber view of heart appears normal.

- NT measures up to : 0.10 cm
- Nasal bone visualized: 0.21 cm
- No e/o tricuspid regurgitation.
- Ductus venosus shows normal flow .
- Placenta - Anterior.
- Cervical length (6 cm) Internal os is closed.

Mrs. Lubna . Kausar

Age - 30 female

Test Double Markas

Wight - 80

Hight - 5.8

DOB - 24/12/1993

Obstetric Doppler Study :

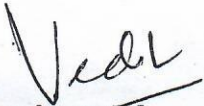

| | RI | PI | S/D | Waveform | percentile |
|----------------------|------|------|-----|----------|------------|
| Right Uterine artery | 0.55 | 0.90 | 2.2 | Normal | |
| Left Uterine artery | 0.54 | 0.91 | 2.1 | Normal | |

- Mean uterine artery PI: 0.90 Normal.

Opinion : *Single viable intrauterine foetus with Changing Lie at the time of examination. The average sonic maturity of foetus corresponds with 11 weeks 6 days.*

Declaration : I have neither detected nor disclosed the sex of the fetus of pregnant women to anybody as laid in rule 10 (IA).

Advice: *Clinical correlation & follow up for Anomaly scan between 19-20weeks.*
