

Patient data			
Name		Mrs. LASYA TWIN-A	
Patient ID		0352307050032	
Birthday		20-06-1998	
Sample ID		24331342	
Age at sample date		25.0	
Sample Date		05-07-2023	
Gestational age		13 + 2	
Correction factors			
Fetuses	2	IVF	no
Weight	48.5	diabetes	no
Smoker	no	Origin	Asian
Previous trisomy 21 pregnancies		unknown	
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	12.62 mIU/mL	1.00	Gestational age
fb-hCG	39.1 ng/mL	0.49	Method
Risks at sampling date			CRL Robinson
Age risk			04-07-2023
Biochemical T21 risk			Crown rump length in mm
Combined trisomy 21 risk			72.9
Trisomy 13/18 + NT			Nuchal translucency MoM
			0.88
			Nasal bone
			present
			Sonographer
			NA
			Qualifications in measuring NT
			MD
Risk		Trisomy 21	
1:10		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.	
1:100		After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy.	
1:250		The risk for this twin pregnancy has been calculated for a singleton pregnancy with corrected MoMs.	
1:1000		The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.	
1:10000		Please note that risk calculations are statistical approaches and have no diagnostic value!	
Cut off		The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).	
Age		The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
