Lower edge of placenta is 3.6 cm away from the internal os (Not low lying).

Length of cervix 3.1 cm.

Doppler study normal.

Adv.Target scan at 18- 20 wks.

DR. D. V. JALAK

Disclaimer

Please note that, ultrasound has its own limitations and can not detect all the abnormalities. The pick up rate of abnormalities depends on maternal body habitus, amount of liquor, fetal position and gestational age of the fetus. All fetal congenital anomalies can not be detected on USG, some may remain undetected due to fetal position, maternal body habitus, amount of liquor and gestational age of the fetus. Some evolving anomalies are evolved as gestational age advances. Taken all the precaution for prevention of COVID 19 during the scan.
