Dr. Kedar S. Joshi

M.D. (Rad.)

Consultant Radiologist & Sonologist
Reg. No. 57856

Facilities Available : Digital X-Ray, Colour Doppler, Sonography
SAKKARDARA SCAN & DIAGNOSTIC CENTER Whole Body CT Scan Pathology

NAME : MRS TAHREEN KHAN 15/07//23

AGE : 23 YEARS

REF BY : DR MRS NILOFER SHEIKH BUMS CGO

ULTRASOUND | LEVEL II ANOMALY | SCAN OF GRAVID UTERUS

LMP - 08/03/23

EDD - 13/12//23

Uterus shows a single live fetus with Breech presentation

The fetal cardiac activity is regular with heart rate of 158 b / min. Foetal movements are normal.

Foetal growth parameters are: BPD 48.2 mm AC - 146 mm
FL - 30.6 mm

These parameters correspond to a gestational age of 19 weeks 3 days +/- 1.5 weeks.
No IUGR. Present foetal weight is about 285 gms.

EDD - 09/12//23

Amniotic fluid is adequate for this period of gestation. [AFI - 13.8 cm]

Foetal brain and spine are normal No hydrocephalus noted No spinal dysraphism seen
No meningocele appreciated Skull bones are normal

Foetal fundic bubble well visualized
Bowel loops appear normal in caliber No ascites noted

Both kidneys and liver are normal No hydronephrosis noted on both sides Distended urinary bladder seen
Gall bladder is normal

Foetal both upper and lower limbs are normal in length and well formed

Foetal heart is 4 chambered and appear normal in size Outflow tracts appear normal
Interventricular and interatrial septum are intact
[Foetal ECHO is not included in study]

Foetal orbits are normal in size Intraocular lens appreciated
Nose appear normal

Foetal thorax show normal both lungs No pleural effusion seen
Both diaphragms are normal in position

No demonstrable congenital abnormality seen (All congenital anomalies not detected by USG Foetal ECHO is suggested to rule out cardiac anomalies)

Placenta is grade I Posterior and in upper segment No placental separation or retroplacental clot. No Placenta Accreta appreciated

Cervix is normal in length]. Internal os is closed

No obvious cord around neck seen Cord insertion is normal at placenta

Foetal tone and respiratory movements are normal

Both uterine arteries show normal flow pattern PI- 0.82 and 0.79

**OPINION : SINGLE LIVE FOETUS WITH BREECH PRESENTATION WITH
AVERAGE GESTATIONAL AGE OF ABOUT 19-20 WEEKS -
LIQUOR IS ADEQUATE FOR GESTATION.
PLACENTA IS GRADE I, UPPER SEGMENT.
NO DEMONSTRABLE CONGENITAL ANOMALY SEEN**

I Hereby declare that, during Sonography I Have not disclosed sex of the foetus to the patient

No. of films : 1
