1 in 385

< 37 weeks: On the basis of this assessment the patient has been classified as being at low risk for
developing PE before weeks.

CONCLUSION :

Single, live, intrauterine pregnancy, of around 12 Weeks 6 Days.

Suggest anomaly scan at 19 to 20 weeks.

DR ABHAY U BONDADE

MD RADIOLOGY

(I declare that during the examination. I have neither detected nor disclosed the sex of the fetus to anybody in any manner.
Not all anomalies, can be detected on sonography depending upon various factor like gest age, fetal position,
amount of liquor, maternal abdominal wall thickness, patient co-operation etc.)

I declare that by undergoing ultrasonography / image scanning etc. I do not want to know the sex of my fetus.
माझी करण्यात येणारी सोनोग्राफी ही गर्भलिंग निदानासाठी नाही याची मला जाणीव आहे. यासाठी मी स्वच्छेने संमती देत आहे.
