

Patient data								
Name		Mrs. MD SALMA TWIN-A		Patient ID		0012309060490		
Birthday		08-02-1993		Sample ID		24818601		
Age at sample date		30.6		Sample Date		06-09-2023		
Gestational age		12 + 5						
Correction factors								
Fetuses		2	IVF	no	Previous trisomy 21 pregnancies		unknown	
Weight		63	diabetes	no				
Smoker		no	Origin	Asian				
Biochemical data				Ultrasound data				
Parameter		Value		Corr. MoM		Gestational age		12 + 4
PAPP-A		4.63 mIU/mL		0.62		Method		CRL Robinson
fb-hCG		42.41 ng/mL		0.50		Scan date		05-09-2023
Risks at sampling date				Crown rump length in mm				64.1
Age risk				1:604		Nuchal translucency MoM		1.03
Biochemical T21 risk				1:5223		Nasal bone		present
Combined trisomy 21 risk				<1:10000		Sonographer		VYSHALI
Trisomy 13/18 + NT				<1:10000		Qualifications in measuring NT		MD
Risk				Trisomy 21				
				The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The risk for this twin pregnancy has been calculated for a singleton pregnancy with corrected MoMs. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!				
Trisomy 13/18 + NT								
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
