Pt Name. **MAMATHA** AGE: 25 Y/F DATE: 06.09.2023

Ref by Dr **TRIVENI MS OBG** INDICATION: EARLY TIFFA

OBSTETRIC ULTRA SOUND SCAN WITH EARLY TIFFA REPORT

Single live intrauterine gestation noted with transverse presentation at the time of scan
 Fetal cardiac activity noted HR = 163 PM
 Fetal movements noted
 Liquor is adequate, clear
 Placenta is posterior grade - I maturity upper segment,

FOETAL BIOMETRY

BPD	:	4.19 cm	18 wks 5 days
HC	:	15.72 cm	18 wks 4 days
AC	:	14.17 cm	19 wks 4 days
FL	:	2.91 cm	19 wks 0 days
CGA	:	19 weeks 0 days	
EDD	:	31/01 / 2024	
BW	:	273 gm +/- 41 gm	
CX	:	3.1 cm , Internal os : normal	

Continue.....

Note : The science of the radiological diagnosis is based on the interpretation of various shadows produced by both normal & abnormal tissue. Dissimilar diverse diseases produce similar shadows, hence this report is not for confirmation for the diagnosis and only represents part of professional opinion in some of the various variables known & unknown does exist.

TIFFA

Head and neck:

Cisterna magna, Lateral cerebral ventricles, mid line falx normal

Face:

Orbits are normal

Nose and lips normal, PMT seen

Chest:

Heart 4 chamber view normal

Diaphragm normal

Abdomen:

Stomach bubble normal

Kidneys, Bladder normal

Spine normal

Extremities: Upper, Lower limbs are normal

IMPRESSION:

-Single live Intrauterine gestation of 19 weeks 0 days gestational age $\pm$ 2 weeks with no obvious anomalies

Advised F/U scan at 24 weeks to R/O progressive anomalies

**DR. APARNA
RADIOLOGIST**

I Dr. R. APARNA declare that while conducting USG on MAMATHA 25 Y/F. I have neither detected nor disclosed the sex of the fetus to anybody in any manner. Determination of fetal sex is illegal (section PNMT ACT 1994).

Note: In spite of sincere search all anomalies cannot be ruled out by ultra sound, since assessment of fetal anomalies depends on fetal position, liquor volume, maternal obesity and period of gestation at the time of scan.

In BMT with HTN Doppler studies are helpful in evaluation IVGR & viability

All GIT abnormalities & small VSD, ASD, PDA cannot be ruled out with this scan.

Ultra sound scan alone cannot exclude all genetic syndromes or chromosomal abnormalities. Various shadows produced by both the fetus & the surrounding structures are visible on the sonography. Hence this report is not for confirmation for the diagnosis and only represents part of professional opinion in some of the various possibilities and number of variables known & unknown does exist.

Note :

our trust is our strength
