 Bringing life in your lives...

Patient name	Mrs. AMRUTA BATAMWAR	Age/Sex	35 Years / Female
Patient ID	17/07/2023/UB2	Visit No	2
Referred by	Dr. SHILPI SUD	Visit Date	22/09/2023
LMP Date	22/04/2023 LMP EDD: 27/01/2024[21W 6D]		

OB - 2/3 Trimester Scan Report

Indication(s)

ANOMALY SCAN

Real time B-mode ultrasonography of gravid uterus done.

Route: Transabdominal

Single intrauterine gestation

Right uterine PI : 0.78.

Left uterine PI : 0.68.

Mean PI : 0.73

Fetus

Survey

Presentation - CHANGING LIE

Placenta - Anterior

Liquor - Normal

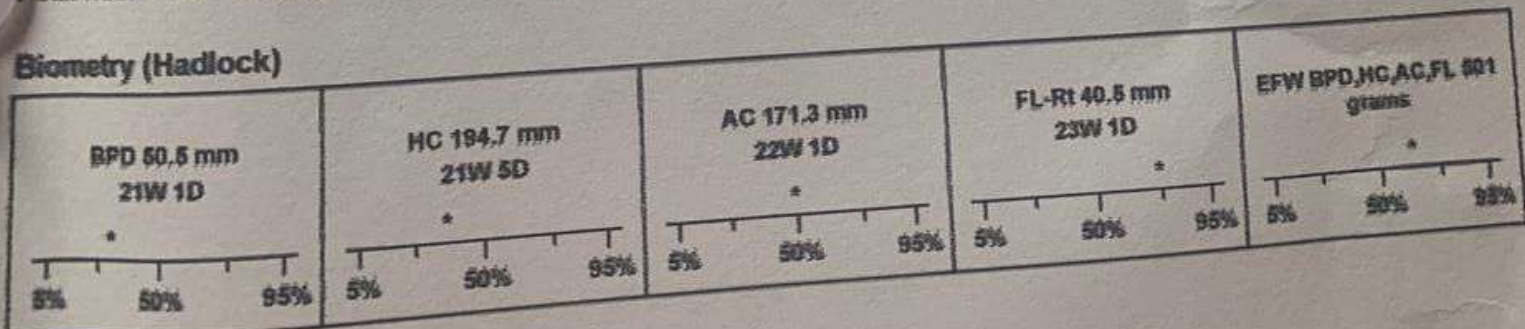

Umbilical cord - Two arteries and one vein

Fetal activity present

Cardiac activity present

Fetal heart rate - 150 bpm

Biometry (Hadlock)

Humerus 36.4 mm

TCD : 22.8 mm

Aneuploidy Markers

Nasal Bone : 6.5 mm - SEEN

Nuchal Fold : 5 mm - Normal

Fetal Anatomy

Right lateral ventricle measured 6 mm

Cisterna magna measured 6.2 mm

Midline faix seen.

Both lateral ventricles appeared normal.

Posterior fossa appeared normal.

No identifiable intracranial lesion seen.

Spine appeared normal. Sacral tapering seen

Both orbits seen

Situs solitus with levocardia

4 chamber view seen

3VV normal

2 ventricular filling jets seen

V confluence seen

Stomach bubble seen

Cord insertion seen

Ductus venosus flow normal

Right and Left kidneys appeared normal.

Bladder appeared normal

Both Upper limbs seen

Both lower limbs seen

Both hands clutched

Three segments of each of four limbs seen. Cosmetic abnormalities of digits and toes cannot be excluded. Counting

is also difficult in clutched hands

Only listed structures seen

Fetal doppler

Ductus Venosus PI : 0.4

Impression

Single gestation corresponding to a gestational age of 21 Weeks 6 Days

Gestational age assigned as per LMP

Placenta - Anterior

Presentation - CHANGING LIE

Liquor - Normal

Estimated fetal weight according to BPD, HC, AC, FL :- 501 +/- 50.1 gms.

IMPRESSION:

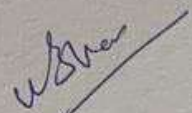

NO OBVIOUS FETAL DEFECTS

NORMAL UTERINE ARTERY DOPPLER AND CERVICAL LENGTH

There are no obvious fetal defects or markers for chromosomal defects seen on the scan today. The fetal cardiac study shows normal findings with normal Doppler flows.

The mother understands that the ultrasonography or any serum screening tests are indirect tests for diagnosis of aneuploidies and the only confirmatory test for aneuploidies is by invasive (Amniocentesis at this stage) which carries risk of miscarriage of 1 in 300.

Recommendation: Fetal ECHO at 24 wks.

DR URVI BHAVSAR

Disclaimer

I have neither detected nor disclosed the sex of foetus to anybody in any manner.

All congenital anomalies cannot be detected at anomaly scan alone. Information given is based on the findings of the scan done today. No obvious anomaly does not necessarily guarantee structural and functional normality of the fetal organs today or in future.

Fetal digits and ear examination is not a part of routine anomaly scan
