Risks at sampling date		Trisomy 21	
Age risk	1:910	The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.	
Biochemical T21 risk	<1:10000	After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy.	
Combined trisomy 21 risk	<1:10000	The PAPP-A level is high.	
Trisomy 13/18 + NT	<1:10000	The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.	
		Please note that risk calculations are statistical approaches and have no diagnostic value!	
		The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).	
		The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Risk		Trisomy 13/18 + NT	
		The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
