● **Doppler-Uterine arteries:**

- : On Doppler interrogation, right uterine artery shows pulsatility index of 1.78.
- : On Doppler interrogation, left uterine artery shows pulsatility index of 1.42.
- : Average pulsatility index is 1.60, which is below the 95th centile values.

IMPRESSION:

Single live intrauterine gestation of 11 weeks 5 days.

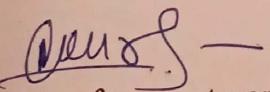

NT scan is normal.

Advise correlation with serum double/triple markers.

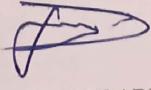

Suggest anomaly scan at 18-20 weeks.

All congenital anomalies are not detected by sonography and are subject to fetal position and advanced gestational age. All measurements including birth weight are subject to statistical variations.

* I MRS. RIMA SWAPNIL SURVASE declare that by undergoing ultrasonography/image scanning etc. I do not want to know the sex of my foetus.

Signature of pregnant women *

I, DR. PRATIK JOSHI declare that while conducting ultrasonography/image scanning etc. on MRS. RIMA SWAPNIL SURVASE, I have neither detected nor declared sex of her foetus to anybody in any manner.
