Allergy

10/26/2023

Allergy(s) Reaction Remark

clv Headache }
fever } 8-10 days

As per the history given by wife pt was c/o
10 days back then he developed fever. ~~with~~ muscle
gladness ~~muscle~~ also headache. 1 month.
headache - more in frontal region.

sleep affected. ~~life~~
pt is in altered ~~consciousness~~ 1-2 days.

pt has H/o TB 1 year back for & pt took ATT for

1 year.

pt has H/o DM 3 months for & muscle weakness
not brought by pt.

Created By: Sameer Khan

∴ 876 days pt had H/O insidious
abnormal behaviour a/w Bowel - bleed
incontinence

for a pt was taken to a pt hospital
where he was adm. , work up done

H/O ~~the~~ HIV +ve

CSF R/m H/O : Hypoglycaemia
& gwt. lymphocytes total (19 cells)

o/e: GC - poor
P = 72/mm

HIV I AND II ANTIBODIES

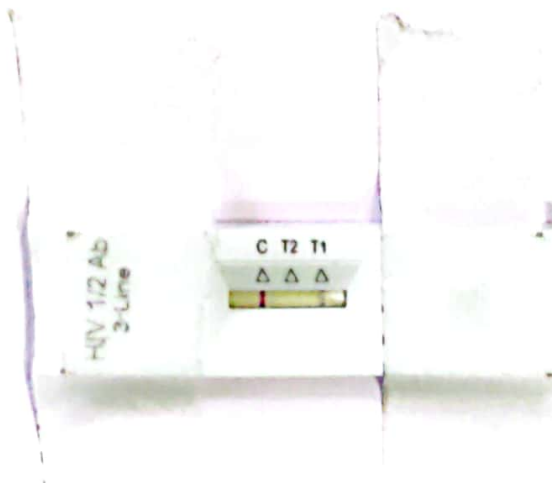

Observation
Method
NOTE

: Positive

: by rapid card

: The above test is a screening test for detection of HIV I and II antibodies in human serum or plasma immobilized on an immunofiltration membrane. HIV I and HIV II viruses share many morphological and biological characteristics. It is likely that due to this reason, their antibodies behave via cross reactivity of 30-70 % Then tested using Recombinant proteins. Appearance of dots of HIV I and HIV II antibodies on the test device does not necessarily imply co-infection from HIV I and II.

This is only a screening test. All positive detected sample shall be reconfirmed by using WESTERN BLOT techniques. Negative test result does not exclude the possibility of infection or exposure to HIV.
