First Trimester Screening Report

MRS Sony

Date of birth : 19 March 2002, Examination date: 23 November 2023

Address: NALGONDA

Hospital no.: KFC11492

Mobile phone: 9603898555

Referring doctor: TRIVENI

Maternal / Pregnancy Characteristics:

Racial origin: South Asian (Indian, Pakistani, Bangladeshi).
Parity: 0.
Maternal weight: 44.0 kg; Height: 152.0 cm.
Smoking in this pregnancy: no; Diabetes Mellitus: no; Chronic hypertension: no; Systemic lupus erythematosus: no; Antiphospholipid syndrome: no; Patient's mother had preeclampsia: no.
Method of conception: Spontaneous;
Last period: 03 July 2023

EDD by dates: 08 April 2024

First Trimester Ultrasound:

US machine: E 6. Visualisation: good.
Gestational age: **13 weeks + 2 days** from CRL

EDD by scan: 28 May 2024

Findings	
Fetal heart activity	Alive fetus visualised
Fetal heart rate	157 bpm
Crown-rump length (CRL)	71.0 mm
Nuchal translucency (NT)	1.1 mm
Biparietal diameter (BPD)	21.0 mm
Ductus Venosus PI	1.100
Placenta	posterior low
Amniotic fluid	normal

Chromosomal markers:
Nasal bone: present; Tricuspid Doppler: normal.

Fetal anatomy:
Skull/brain: appears normal; Spine: appears normal; Heart: Appears normal; Abdominal wall: appears normal; Stomach: visible; Bladder / Kidneys: visible; Hands: both visible; Feet: both visible.

Uterine artery PI: 1.65 equivalent to 1.020 MoM
Endocervical length: 31.0 mm

Risks / Counselling:

Patient counselled and consent given.

Operator: Lekkala Kalpana, FMF Id: 173593

Condition	*Background risk*	*Adjusted risk*
Trisomy 21	1: 1088	1: 9554
Trisomy 18	1: 2747	1: 11353
Trisomy 13	1: 8591	<1: 20000
Preeclampsia before 34 weeks		1: 436
Fetal growth restriction before 37 weeks		1: 90

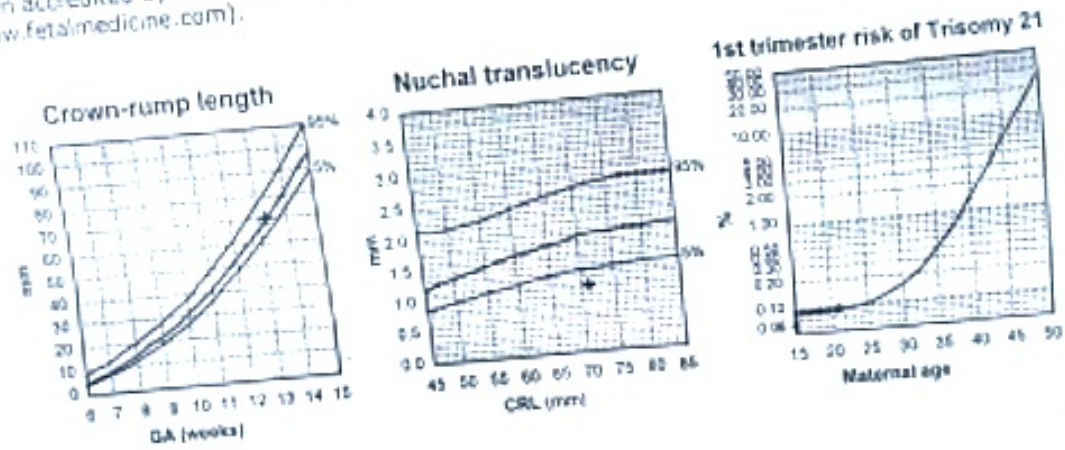
1st Trimester Screening Report

The background risk for aneuploidies is based on maternal age (21 years). The adjusted risk is the risk at the time of screening, calculated on the basis of the background risk and ultrasound factors (fetal nuchal translucency thickness, nasal bone, fetal heart rate).

Risks for preeclampsia and fetal growth restriction are based on maternal demographic characteristics, medical and obstetric history and uterine artery Doppler. The adjusted risk for PE < 34 weeks or the adjusted risk for FGR < 37 weeks is in the top 10% of the population. The patient may benefit from the prophylactic use of aspirin.
All biophysical markers are corrected as necessary according to several maternal characteristics including racial origin, weight, height, smoking, method of conception and parity.

The estimated risk is calculated by the FMF-2012 software (version 2.81) and is based on findings from extensive research coordinated by the Fetal Medicine Foundation (UK Registered charity 1037116). The risk is only valid if the ultrasound scan was performed by a sonographer who has been accredited by the Fetal Medicine Foundation and has submitted results for regular audit (see www.fetalmedicine.com).



Comments

Single live intra uterine fetus corresponding to 13 weeks 2 day.

Down syndrome screen negative based on NT scan.

Uterine doppler shows high resistance flow.Suggested to Tab Asprin upto 36 weeks.

Suggested DOUBLE MARKER.

Suggested TIFFA SCAN at 19 to 20 weeks. (Jan 5th to 8th)

I,Dr.L.Kalpana reddy,declared that while conducting ultrasonography / imaging scanning on Mrs.SONY,I have neither detected nor disclosed the sex of fetus to any body in any manner.
