ANATOMICAL SURVEY:

HEAD: Lateral ventricles, Choroid plexus, Thalamus and posterior fossa including cerebellum and cisterna magna appear normal.

FACE : Orbits are normal. Lips are normal.

UPPER LIMBS : Both upper limbs are normal.

LOWER LIMBS : Both lower limbs are normal. No evidence of club foot seen.

SPINE : Fetal spine appears normal. No evidence of significant open neural tube defect.

HEART & LUNGS : Four chamber is normal. Outflow tracts are normal. Both lungs are normal. No pleural/pericardial effusion noted.

KIDNEYS : Normal. No pyelectasis noted. Right renal pelvis measures 1.7 mm. Left renal pelvis measures 1.9 mm.

BLADDER : Normal.

STOMACH : Normal

UMBILICAL CORD : Normal

Right uterine artery PI- 0.7.

Left uterine artery PI- 0.6.

Please note that, ultrasound has its own limitations and cannot detect all the abnormalities. The pickup rate of abnormalities depend on maternal body habitus, amount of liquor, fetal position and gestational age of the fetus.

IMPRESSION:

- Single live-intrauterine fetus in variable presentation of gestational age 20 weeks 4 days.
- Visualised fetal organs appear sonologically normal.

I hereby declare that I have neither detected nor disclosed the sex of the foetus of pregnant women to anybody.
