

Patient data					
Name	Mrs. MANISA PANDA TWIN B		Patient ID	0652312020118	
Birthday	03-03-1998		Sample ID	25041297	
Age at sample date	25.7		Sample Date	02-12-2023	
Gestational age	13 + 0				
Correction factors					
Fetuses	2	IVF	no	Previous trisomy 21 pregnancies	unknown
Weight	70	diabetes	no		
Smoker	no	Origin	Asian		
Biochemical data			Ultrasound data		
Parameter	Value	Corr. MoM	Gestational age	13 + 0	
PAPP-A	6.23 mIU/mL	0.85	Method	CRL Robinson	
fb-hCG	56.12 ng/mL	0.73	Scan date	02-12-2023	
Risks at sampling date			Crown rump length in mm	70.1	
Age risk	1:942		Nuchal translucency MoM	0.87	
Biochemical T21 risk	1:7996		Nasal bone	unknown	
Combined trisomy 21 risk	<1:10000		Sonographer	NA	
Trisomy 13/18 + NT	<1:10000		Qualifications in measuring NT	MD	
Risk			Trisomy 21		
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The risk for this twin pregnancy has been calculated for a singleton pregnancy with corrected MoMs. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!		
Trisomy 13/18 + NT					
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
