Saturday Closed

Radiologist  
Reg. No. 90678  
• 2D / 3D / 4D SONOGRAPHY • DIGITAL X-RAY  
• WHOLE BODY COLOUR DOPPLER • 2D ECHO

Date : 22 Nov 2023

Patient Name : Mrs. Rohini Mohite  
Referred By : Dr. Khabale Shivajirao (MBBS DGO FCPS)  
Age : 25 Yrs. Sex : F  
Examination : USG Obstetric.

E.D.D. (by dates) 17-04-24.

L.M.P. 12-07-23.

Single live intrauterine pregnancy.  
Cephalic presentation.  
Foetal cardiac activity & movements are normal. FHR: 150bpm.  
Placenta is located along anterior wall. Shows Grade I maturity.  
Encroaching upon lower uterine segment.  
Lower edge is 2.5 cm away from internal os.  
Amount of Amniotic fluid is adequate.  
Amniotic fluid index (A.F.I.) is 16 cm.  
Internal os is closed. Cervical length is adequate (3.9 cm).

#### GROWTH PARAMETERS: (In cm).

B.P.D.	4.57	19 Weeks 6 Days
H.C.	16.3	19 Weeks 0 Days
A.C.	14.1	19 Weeks 4 Days
F.L.	2.93	19 Weeks 0 Days

AVERAGE: 19 Weeks 3 Days +/- 1 Week.

E.F.W. 285 gms. E.D.D. 14/04/24.

#### Head.

Lateral ventricles are seen. Cerebellum is seen.  
Cisterna magna is seen. No obvious intra-cranial lesion.

#### Neck.

No obvious solid or cystic lesion seen around neck.

#### Spine.

Entire spine is visualized in longitudinal & transverse plane.  
Vertebrae & spinal canal imaged. No spina bifida or protrusion.

#### Face.

Orbits, nose & mouth are imaged. No e/o cleft lip.

**Thorax.**  
Normal cardiac situs. Four chamber view is imaged.  
Ventricular outflow tracts are imaged.

IVS is seen (small VSD may not be detected).  
Both lungs are seen. No pleural or pericardial effusion seen.

No obvious SOL is seen in thorax.

**Echogenic intra-cardiac focus is seen in left ventricle.**

For detailed cardiac evaluation foetal echo / doppler is suggested.

**Abdomen.**  
Stomach & bowel loops are seen. No ascites.

No diaphragmatic hernia. Abdominal wall is intact.

**KUB.**

Both kidneys & bladder are seen.

**Limbs.**

All foetal longs bones are imaged in present foetal position.

No obvious CTEV.

Hands, digits & toes may not be visualized due to positional difficulties.

#### IMPRESSION:

- \* Single live intrauterine pregnancy of AGA 19 weeks & 3 days.
- \* No obvious congenital anomaly seen at present foetal position & current gestational age.
- \* Placenta is encroaching upon lower uterine segment.
- \* Echogenic intra-cardiac focus in left ventricle (Isolated finding)

*Sex of the foetus is neither detected nor disclosed to anybody in any manner.*

*Foetal survey is limited by foetal position, movements, quantity of amniotic fluid & thickness of maternal anterior abdominal wall.*

*Some anomalies are evident at later stages of pregnancy; for which follow up is suggested.*

*Hence all congenital anomalies / malformations are not detected by an ultrasound examination.*

*Foetal echocardiography is not included in this study.  
TAPVC screening is not a part of this examination.*

  
**Dr. Abhijeet G. Thombare**  
Radiologist & Sonologist.

*Many thanks for reference.*
