NAME: Sonali Santosh Borkar
REF. BY: Dr. Sonali Hivraj Pardhikar

AGE: 24 Years
DATE: 04-Jan-24

FIRST TRIMESTER SCAN (NT SCAN)

LMP- 07-Oct-23

GA- 12 weeks 5 days

EDD by LMP- 13-Jul-24

Uterus shows a single gestational sac with a single fetus in it.
Cardiac pulsations are well seen. (F.H.R = 157 b/min).
Placenta is anterior.
Cervical length is 3.96 cm. Internal OS is closed.

C.R.L = 6.39 cm corresponds to 12 weeks 5 days gestation.

Nuchal translucency measure 1.47 mm.

Nasal bone is visualized.

Ductus venosus reveals normal waveform.

No tricuspid regurgitation.

Stomach bubble and urinary bladder are seen.

All four limbs are seen.

Spine grossly appears normal.

Midline falx seen.

3 vessels cord is noted.

COMMENT:

- Single live intrauterine gestation of 12 weeks 5 days.
- EDD by USG - 13-Jul-24.
- Normal 1st trimester scan.
- Advice - Dual Marker.

P.N.: - All measurements including estimated fetal weight, are subject to statistical variations.
- Not all anomalies can be detected on sonography.

I Dr. Swapnil Suresh Ranpise declare that while performing sonography on Mrs. Sonali Santosh Borkar

I Have neither detected nor disclosed the sex of the fetus to anybody in any manner.

Suggest: Follow up for structural details.
