Name: Mrs. Shwani Datta More
Age: 25Yrs / Female
Ref. By: Dr. Manish Machave

Date: 09.12.2023
PRN: —

OBSTETRIC ULTRASOUND NT SCAN (TAS)
(With relevant image copies)

	Date	GA	Weeks	Days	EDD BY LMP	EDD BY USG
LMP	04-09-2023	GA BY LMP	13	5	10-06-2024	18-06-2024
		GA BY USG	12	4		

- Uterus gravid and shows single live intrauterine gestational sac. Sac margins are regular.
 - Fetal pole seen. FHR - 182 bts / min. Good cardiac activity.
 - CRL - 21.5 mm - 12 weeks 4 days.
 - BPD - 16.8 mm - 12 weeks 4 days.
 - Nuchal translucency is within normal limits for the gestational age (1.1 mm).
 - Nasal bone seen, normal. DV show normal wave form.
 - Decidual reaction is good. No Subchorionic bleed or collection.
 - Placenta is forming on anterior wall.
 - Cervix measures 3.2 cms (TAS), normal. Internal os closed.
 - No focal myometrial lesions. No adnexal mass/ free fluid.
 - Right uterine artery PI: 1.24 Left uterine artery PI: 1.98 Average PI: 1.61
- However, I, Dr. Yogesh Jewlikar, the undersigned hereby declare that there is no 100% guarantee. All the anomalies may not always be detected in a particular scan as ultrasound has its own limitations. Detection of congenital anomalies depends on fetal age, fetal position, liquor amount, tissue penetration of sound waves, mother's body habitus & technical limitations. Few late onset anomalies may evolve as late as 28 weeks. The present study cannot completely confirm absence of any or presence of all congenital anomalies in the fetus which may be detected in the postnatal period. USG workers but screening of chromosomal anomalies may not be always evident & as such there may be false negative results.

IMPRESSION:

- Single live intrauterine gestation corresponding to 12 weeks 4. days +/- 1 week in maturity.
- Advised detailed Anomaly scan around 18-22 weeks.

Declaration:-

I, Dr. Yogesh Jewlikar, the undersigned hereby declare that while conducting ultrasonography on Mrs. Shwani Datta More, I have neither detected nor disclosed the sex of her fetus to anyone in any manner.

DR. YOGESH JEWLIKAR
CONSULTANT RADIOLOGIST

(Note: Sonography has its limitations and the result should be correlated with clinical and other relevant patient data. Detection of congenital anomalies depends on fetal age, position, liquor amount, maternal obesity etc.)
