## Early Obstetrical Sonography

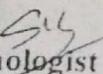

Single viable Fetus seen in the intra uterine cavity. C.R.I. measuring 48.4mm is corresponding to 11wks and 4days. Cardiac activity seen- 153bpm

NT: 0.8mm

GA by USG: 11wks and 4days EDD by USG: 23.07.2024  
GA by LMP: 11wks and 6days EDD by LMP: 21.07.2024

### OPINION:

- Single viable fetus of 11wks. & 4d (+/- 5d) seen in the intrauterine cavity.

  
Sonologist

No obvious congenital anomaly seen at the time of scan. However all congenital anomalies cannot be detected sonographically & detection of abnormality may be dependent on the position of fetus at the time of scan.

I have neither detected nor disclosed the sex of her fetus to anybody in any manner.
