

Patient data			
Name	Mrs. LAXMIPRIYA BHANJA		Patient ID
Birthday	11/04/89		Sample ID
Age at sample date	34.8		Sample Date
Gestational age	12 + 6		
Correction factors			
Fetuses	1	IVF	no
Weight	76.2	diabetes	no
Smoker	no	Origin	Asian
Previous trisomy 21 pregnancies		unknown	
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	4.12 mIU/mL	1.22	12 + 6
fb-hCG	41.32 ng/mL	1.15	Method
Risks at sampling date			CRL Robinson
Age risk	1:290		Scan date
Biochemical T21 risk	1:1969		13/01/24
Combined trisomy 21 risk	1:9519		Crown rump length in mm
Trisomy 13/18 + NT	<1:10000		67.4
			Nuchal translucency MoM
			0.76
			Nasal bone
			present
			Sonographer
			NA
			Qualifications in measuring NT
			NA
Risk		Trisomy 21	
		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 9519 women with the same data, there is one woman with a trisomy 21 pregnancy and 9518 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be held responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
