REGN NO : 388 / 2024
PERSONAL NO : 17039039F

ULTRASOUND ANC FIRST TRIMESTER

FINDINGS:

- Single live intra uterine pregnancy with FCA noted. LMP: 18.10.2023
- CRL = 53.9 mm GA: 13w 0d
- NT= 1.2 mm
- NB-well formed
- Adequate liquor and placentation
- Cervical length
- Bilateral adnexae are normal
- No anencephaly
- The Ductal venous flow is normal with no reversal seen .

IMPRESSION:

Single live intrauterine gestation of 12 wk 0 day.

6 x prints

Suggest review scan during 18-20 weeks of gestation to evaluate for any congenital anomalies.

I declare that while conducting Ultrasonography / image scanning, I have neither detected nor disclosed the sex of her foetus to any body in any manner. This scan is a routine obstetric sonography scan and is not intended to guarantee the absence of birth defect or congenital anomalies. The USG scan is an investigation and therefore has technical limitations as well as inaccuracies inherent in the laboratory and statistical analysis of the biological processes. It should always be viewed in this perspective and correlated clinically. Detailed fetal anatomy may not always be visible due to technical difficulties related to fetal position, amniotic fluid volume, fetal movement and maternal abdominal wall thickness. Therefore all fetal anomalies may not necessary be detected at every examination.

Jatinder Kumar
