FOETAL DOPPLER

BILATERAL MATERNAL UTERINE ARTERIES PI IS NORMAL
Right Ut Art PI- 0.98, Left Ut Art PI-1
Average Uterine PI -0.99

IMPRESSION :

- THERE IS SINGLE, LIVE, INTRAUTERINE GESTATION OF 20 WKS 2 DAYS
- NO FOETAL ANOMALIES ARE SEEN.
- U/S E.D.D-12/06/2024
- This report does not include 2D fetal echo (Foetal echo cardiography is advised for detailed fetal cardiac evaluation)

DR. ROOPVARSHA JAIN
CONSULTANT RADIOLOGIST
REG.NO.10148

While conducting ultrasonography on mrs. JYOTI I have neither detected nor disclosed the sex of her fetus to anybody in any manner.

DR. ROOPVARSHA JAIN
CONSULTANT RADIOLOGIST REG.NO.10148

Please note the limitations of Obstetric Ultrasound Scanning

- Scanning of the foetal anatomy can be affected by various factors like maternal abdominal wall thickness & tissue echogenicity, scars, fetal lie, amniotic fluid volume, fetal gestation and other factors.
- Therefore all the anomalies may not be necessarily be detected.
- A "Normal" scan of the fetus does not mean that the fetus will be normal at birth as the fetus is developing all the time.
- This report does not include 2D foetal echo.
