Dr. Ankush N. Balki

MBBS, DMRE

Life member IMA, SFM Member

(Scholarship) Specialized in fetal medicine

Reg. No. 2019/03/0772

PATIENT	: MRS. Sanjiwani Amol Mohitkar	DATE	: 01 Feb 2024
REF. BY	: Dr. NILESHA BALKI MADAM	AGE/GENDER	: 33 YEARS /F

OBSTETRIC SONOGRAPHY (NT SCAN)

- A single intra-uterine gestation.
- Fetal cardiac activity is appreciated. FHR = 180bpm.
- Placenta is **Anterior**. No any retroplacental hematoma
- Amniotic fluid is adequate.
- Internal-os is closed. No evidence of any herniation or coning of gestational sac. Cervical length= 35 mm.
- Both ovaries appear normal. No evidence of any adnexal mass lesion.

Fetal Parameters:

Parameters / Markers	Finding	Remark
Nasal Bone	Seen (poor window due to maternal abdominal wall fat)	Normal.
Nuchal translucency	1.9 mm. (70% tile)	Normal
Ductus Venosus Flow	No e/o reversal of 'a' wave	Normal.
Hard palate (premaxillary triangle)	Seen	Normal
All four limbs	Seen	Normal
Ventricles and choroid plexus, Intracranial translucency	Seen	Normal
Spine	Seen	Normal

CRL	5.89cm	12Weeks	3days

REF. BY : Dr. NILESHA BALKI MADAM AGE/GENDER : 33 YEARS / F

LMP	04/11 /2023		
GA by LMP	12weeks & 5days.	GA by present USG	12weeks & 3days.
EDD by LMP	10/ 08/2024	EDD by present USG	12/ 08/ /2024

Fetal head, spine, chest and abdomen grossly appear normal. Fetal urinary bladder appears normal. Stomach bubble appears normal. Diaphragm is intact.
Uterine artery PI = Right UA -2.6 Left UA - 1.9 mean PI 2.25(88 % tile)

IMPRESSION:

- A single live intrauterine gestation of average gestational age of 12weeks 3days.
- Markers for chromosomal anomalies are unremarkable.

SUGGEST: DETAILED ANOMALY SCAN AT 20-21 WEEKS.

I Dr Ankush Balki declare that while conducting the ultrasonography, I have neither detected nor declared the sex of anyone in any way, Not all congenital anomalies are detected on sonography and it may depends on various factors viz.gestation age, Liquor volume, fetal position, fetal movement and maternal obesity etc.
