TEST REPORT

Reg. No : 070224/214
NAME : MRS. SANGITA MANNA MAITY

AGE : 25 YEARS

Date: 07.02.2024

SEX : F

REF. BY : DR. MANASI GULATI

DGO, GYN.

TYPED BY - PK

USG OBSTETRICS WITH TARGETED IMAGING FOR FOETAL ANOMALIES (TIFFA)

Single live intrauterine fetus with **cephalic** presentation is seen at the time of examination.

Liquor is adequate in amount.

The cardiac pulsations and fetal movements are well seen.

The fetal heart rate is = **155 b/minute**.

The approximate gestational age is as follows:

Biparietal diameter	= 4.24 cm corresponds to 18.6 weeks.
Head circumference	= 16.68 cm corresponds to 19.3 weeks.
Abdominal circumference	= 13.76 cm corresponds to 19.1 weeks.
Femur length	= 3.11 cm corresponds to 19.5 weeks.
TIB	= 2.82 cm corresponds to 20.2 weeks.
FIB	= 2.82 cm corresponds to 20.0 weeks.
HL	= 3.15 cm corresponds to 20.4 weeks.
RAD	= 2.37 cm corresponds to 18.6 weeks.
Ulnar	= 2.61 cm corresponds to 19.3 weeks.
Cereb	= 1.97 cm corresponds to 19.0 weeks.

Placenta- Anterior wall, upper and mid uterine segment. Grade-I maturity.

No obvious gross fetal anomaly is noticed in this examination.

The internal os and cervical canal are unremarkable.

The cervix is normal (3.9 cm).

P.T.O.

Pathological Investigation/Radiological impression are merely opinion and the final diagnosis as they are based on available auto generated/ imaging finding. These opinions should be correlated with clinical findings a review of further evaluation may be sought whenever considered appropriate.

Condition of Reporting: 1. It is presumed that the specimen belongs to the patient named in the test request form. 2. A test may not be performed for following reasons: a. Insufficient specimen quality b. Unacceptable specimen quality c. Incomplete specimen type d. Test cancelled either on request of patient or doctor or because of unsatisfactory test results or because of any other reason. 3. All expenses for a fresh specimen will be paid for the purpose of retesting on the same parameters (s), if required.

TEST REPORT

NAME : MRS. SANGITA MANNA MAITY

AGE : 25 YEARS

SEX : F

IMPRESSION:-

- Single Live Intrauterine Pregnancy Cephalic Presentation Is Seen At The Time Of Examination Of 19 weeks + 3 days.

(All measurement including foetal weight is subject to statistical variation. Fetal echo is not done.)

Note:- I Declare that while conducting USG, I have neither detected nor disclosed the sex of her fetus to any body in any manner.

Not all anomalies can be detected on sonography. Detection of anomalies is dependent on fetal position, gestational age, Maternal abdominal obesity and other technical parameters. Fetal limb anomalies not always detectable due to position. Follow up scanning and second opinion are always advisable. For detection of cardiac anomaly foetal echography is necessary. Ear anomalies cannot be detected.

Thanks for the reference,
With regards,
