DR. JYOTI GUPTA
MBBS, DMRD, Radiologist
(Gold Medalist)

Patient's Name : MRS. SAWAN BAI
Refd. By : SELF
Investigation : USG Abdomen & Pelvis

Date: 24.01.2024
Age: Sex 65 Y/F

OBSERVATION

Liver : Liver is normal in size, shape and echogenicity.
No evidence of any focal lesions.
Intra hepatic biliary radicles not dilated.
Portal vein is normal in course and caliber.

Gall Bladder : Multiple cholelithiasis noted in contracted lumen of gall bladder, largest measuring 7.8 mm.
CBD is normal in its entire course (5 mm).

Pancreas : Normal in size, shape and echogenicity.
No evidence of any sizeable mass lesion.
Main pancreatic duct not dilated.

Spleen : Measures: 10.0cm
Normal in size, shape and echogenicity.
No evidence of any focal lesion.
Splenic vein at hilum is normal caliber.

B/L Kidneys : Right Kidney: 8.9 x 4.0 cm
Left Kidney : 9.3 x 4.3 cm
Both kidneys are normal in size, shape and position.
Corticomedullary differentiation preserved.
Pelvicalyceal system not dilated.
Both ureters not dilated

Urinary Bladder : Normal in size, shape and distension.

Uterus : Post menopausal atrophic uterus size – 5.4 x 2.0cm.

- Stomach, jejunal and ileal loops, caecum, ascending colon, transverse colon, descending colon, sigmoid colon, rectum and anal canal appear normal.
- There is defect of approx 1.2 cm noted in anterior abdominal wall just above the umbilical region through which omentum appears to be herniating, suggesting umbilical hernia.

IMPRESSION:-

- Multiple cholelithiasis noted in contracted gall bladder, largest measuring 7.8 mm.
- Supra-umbilical hernia via a defect of 1.2 cm through which omentum is herniating.
