DR. KAMOD KONDAWAR

MBBS, DMRE

Consultant Radiologist and Sonologist

MMC Reg. No. 2015/04/2115

Time : 9.30 am to 4.00 pm and 5.00 pm to 8.30 pm

Patients Name

: MRS. CHAITALI SHUBHAM SONULE

Age: 33 YEARS / F

Referred by

: Dr. NILESHA BALKI MADAM

Date: 23 Feb 2024

Examination

: USG - Obstetric NT Scan

LMP - 27 Oct 2023. GA by LMP - 17w0d. (wrong date)

OBSERVATION:

- #> Urinary bladder partially full.
- #> Single live intrauterine fetus is seen with CRL 54.2 mm corresponding to 12 weeks 1 day.
- #> Cardiac activity is seen with FHR 163 BPM.
- #> Fetal movements are well appreciated.
- #> Gestational sac is regular. Choriodecidual reaction is good.
- #> Placenta is forming posteriorly. Retroplacental zone appears normal.
- #> Amniotic fluid is adequate.
- #> NT appears normal measuring 1.7 mm. (74 percentile - normal for this CRL)
- #> Nasal bone is seen. Ductus venosus flow appears normal.
- #> Right uterine artery PI - 2.05. Left uterine artery PI - 1.62. Mean PI - 1.83 (65 percentile - normal)
- #> Normal choroid plexus, ventricles and falx. Skull vault, upper and lower extremities are visualized.
- #> Cervical length is normal, measures 3.0 cm. Internal os is closed.
- #> No free fluid in Cul-De-Sac.

IMPRESSION:

Sonic findings suggest single live intra-uterine pregnancy corresponding to 12 weeks 1 day gestational age.

Gestational age assigned as per CRL (previous scan dated 28/01/2024).
Assigned EDD - 05/09/2024.

NT appears normal.

Suggested detailed anomaly scan between 18 to 23 weeks.

I declare that while undergoing ultrasonography/image scanning on this patient, I neither detected nor disclosed the sex of fetus to anybody in any manner.

All measurements including estimated fetal weight are subject to statistical variations.

THIS IS ROUTINE LEVEL ONE USG SCREENING & THIS DOES NOT INCLUDE FETAL ANOMALY SCANNING. FETAL ANOMALY SCANNING SHOULD BE ADVISED TO PATIENT AS PER CLINICAL NEED.

Not all anomalies can be detected on sonography. This scan does not include fetal ECHO. Investigations have their limitations. Solitary radiological / pathological and other investigation never confirm the final diagnosis of disease. They only help in diagnosing the disease in correlation to symptom and other related tests. Please interpret accordingly.
