Visualised fetal parts appear normal

Ductus venous doppler show normal forward-wave form with spectral pattern without reversal.

Tricuspid shows normal forward flow no regurgitation

Both uterine arteries show normal colour flow & spectral pattern.

E/o end diastolic notches seen ? physiological

**Impression** : Early gestation of 13 weeks 6 days gestational age with normal NT and normal DV,TV, Uterine arteries spectral forms

Advised double marker

DR. RAPARNA  
RADIOLOGIST

I Dr.RAPARNA declare that while conducting USG on JUVERIA 29 Y/F.

I have neither detected nor disclosed the sex of the fetus to anybody in any manner.

Note: all anomalies cannot be ruled out by ultra sound, since assessment of fetal anomalies depends on fetal position, liquor

**Note :** The volume and depth of the scan is limited by the skill of the operator and the quality of the machine. The report is for information only and not for confirmation for the diagnosis and only represents part of professional opinion in some of the various possibilities and number of variables known & unknown does exist.
