- Placenta: Anterior, Grade-I.
- Ductus venosus reveals normal flow & spectral waveform.
- Bilateral uterine arteries show normal wave form and PI.

FETAL EXTREMITIES:

- All four limbs present with no gross abnormality.

FETAL HEAD:

- Mid line falx is well seen. Both lateral ventricles are normal in size. The posterior fossa appears normal. The cerebellum is normal.

Thanks for Giving

FETAL SPINE:

- Entire spine is visualized in longitudinal and transverse axis.
- The vertebrae and spinal canal appear normal.

FACE:

- Orbita, nose and mouth appear normal.

THORAX:

- The heart appears in normal cardiac situs.
- The four chamber view is normal. **Fetal echo not done.**
- Both lungs are well seen.
- No evidence of diaphragmatic hernia is seen.
- No evidence of pleural or pericardial effusion.

ABDOMEN:

- Abdominal situs appears normal.
- Prominent left fetal renal pelvicalyceal system (AP diameter 3.0 mm) is soft marker for trisomy -Needs quadruple marker correlation.
- Stomach, right fetal renal pelvicalyceal and urinary bladder are normal
- The gall bladder is well seen.
- No evidence of ascites. No abdominal wall defect.

IMPRESSION:

- Single live intrauterine foetus with Breech presentation is seen at the time of examination, which corresponds to gestational age 19 Weeks, 4 Days. EDD- 28.07.2024 +/- 10 Days.
 - USG age lags behind the menstrual age by about 3 weeks.
 - Prominent left fetal renal pelvicalyceal system (AP diameter 3.0 mm) is soft marker for trisomy -Needs quadruple marker correlation.
 - Most of the fetal parameters are less than 5 percentile- Needs NIPT / Quadruple marker correlation.
 - Internal growth appears normal.
 - No other obvious congenital anomaly detected.
- Fetal echo is advised for dedicated evaluation of fetal heart (22-24 weeks).
Suggest clinical & Quadruple markers correlation.

Disclaimer:

Please note that USG study has certain limitations (sometimes fetal anomalies may not get diagnosed due to nature of anomaly, Gestational age, foetal positioning and limitations of machine thence absence of mention of foetal anomaly in study does not always rule out its possibility. (Fetal echo is not included in this scan).

Declaration:

I declare that while conducting Ultrasonography/ Image, Scanning on patient,
I have neither detected nor disclosed the sex of her fetus to anybody in any manner.
