NT SCAN

Transabdominal USG was done

FINDINGS :

L.M.P : 19.12.203 GA: 13 w 0 d EDD: 24.09.2024

There is a single smooth walled intrauterine gestational sac with single fetus.
Fetal cardiac activity and fetal activity are present.
Fetal heart rate is regular. FHR is 153 bpm.

Placenta – Posterior. Low lying - lower end is about 1.2 cm proximal to internal os.
It appears homogenously hyperechoic. No e/o subchorionic bleed seen.
Liquor is adequate. Cervical length- 3.5 cm

Fetal biometry :

CRL is 5.74 cm corresponding to 12 wks 2 days.
BPD is 1.94 cm corresponding to 13 wks 0 days.
AC is 6.00 cm corresponding to 12 wks 6 days.
FL is 0.84 cm corresponding to 12 wks 4 days.

Fetal aneuploidy markers:

Nuchal translucency - 0.7 mm
Nasal bone - seen.
DV shows normal wave pattern.
No e/o TR seen.
ICT seen.

Primary fetal anatomy survey:

Skull bones are well ossified. There is no distortion of skull shape.
Both lateral ventricles appear normal and are filled up with echogenic choroid plexus. Falx midline. Both orbits and mandible appear normal.
Normal vertebral alignment and integrity is seen.
Umbilical cord insertion appears normal.
Stomach bubble and urinary bladder are visualized. All four limbs are visualized.

Bilateral uterine arteries Doppler shows PI value of 1.1 on right side and 0.9 on left
