Structural anomalies visualized and appear normal for the period of gestation.

Placenta appeared normal

Doppler

Medical Aids: Pl: 1 2

Impression

Single gestation corresponding to a gestational age of 19 Weeks 5 Days

Gestational age assigned as per LMP

Placenta - Posterior

Presentation - VARIABLE

Liquor - Normal

Estimated fetal weight according to BPD,AC :- 366 +/- 36.6 FL,AC :- 338 +/- 33.8 BPD,HC,AC,FL :- 335 +/- 33.5 gms.

Suggested GROWTH SCAN at 28 to 30 weeks.

DISCLAIMER

Although a structural screening scan is undertaken,detection of structural anomalies will never be 100%.Detection rates varies and may be reduced by the factors like maternal obesity,abdominal scar,gestational age,inappropriate fetal position and reduced amniotic fluid volume.

All anomalies cannot be ruled out completely in single scan,serial scans are necessary to exclude progressive anomalies.

USG screening does not rule out functional problems as it is only structural screening of fetus.

I,Dr.L Kalpana reddy,declared that while conducting ultrasonography / imaging scanning on Mrs.MANJULA,I have neither detected nor disclosed the sex of her fetus to any body in any manner.
