- The vertebrae and spinal canal appear normal.

**FACE:**

- Orbita, nose and mouth appear normal.

**THORAX:**

- Echogenic focus (2.3 mm) seen in left ventricle of heart is a soft marker for trisomy -Needs quadruple marker correlation.
- The heart appears in normal cardiac situs.
- The four chamber view is normal. Fetal echo not done.
- Both lungs are well seen.
- No evidence of diaphragmatic hernia is seen.
- No evidence of pleural or pericardial effusion.

- Echogenic focus (2.3mm) seen in left ventricle of heart is a soft marker for trisomy -Needs quadruple marker correlation.
- No other obvious congenital anomaly detected.

Fetal echo is advised for dedicated evaluation of fetal heart (22-24 weeks).  
Suggest clinical & serum biochemical markers correlation.

**Disclaimer:**

Please note that USG study has certain limitations ! sometimes fetal anomalies may not get diagnosed due to nature of anomaly, Gestational age, foetal positioning and limitations of machine thence absence of mention of foetal anomaly in study does not always rule out its possibility.(Fetal echo is not included in this scan).

**Declaration:**

I declare that while conducting Ultrasonography/ Image, Scanning on patient.  
I have neither detected nor disclosed the sex of her fetus to anybody in any manner.
