

Patient Name : MRS. ANU

Patient Id/ Bil No. : 2404-0268

Gender/Age : Female /30 Years

Reg. Date : 10-04-2024

Referred By : DR.VIKRANT VIJAY MBBS,D.ORTHO,MS

Reported Date : 12-04-2024

**DEPARTMENT OF RADIODIAGNOSIS AND IMAGING
SONOMAMMOGRAPHY OF BOTH BREASTS**

Clinical history : Check up..

Technique:

Ultrasound scan of breasts was performed with 7.5 MHz linear array transducer.

Findings:

Enlarged left axillary lymphonode noted with preserved hilum and oval morphology
Mildly increased internal vascularity noted. The lymphnode measures 12.6x6.4mm

Well defined irregular hypoechoic lesion measuring 14 x 15 x 23mm with irregular margins and mild increased vascularity there is evidence of posterior shadowing with angular and spiculated margins. The lesion is noted in superolateral quadrant of left breast at 2 o clock position

Both breasts reveal predominantly fibroglandular parenchymal pattern with scanty fatty components.

No evidence of dilated ducts. Pre-mammary, mammary and retromammary spaces are normal.

Both nipples, skin and subcutaneous tissues appear normal.

Both axillary regions appear normal. No significant lymphadenopathy.

Visualized pectoralis muscles appear normal.

IMPRESSION:

- **F/s/o BIRADS III lesion in left breast as described.-
Neoplasm/hematoma/masitits**
- **Suggested clinical / FNAC correlation.**
