no e/o decrease / absent / reversal of diastolic flow

	PI	RI	S/D
Ductus venosus	1.1	0.6	2.6

IMPRESSION:

SINGLE LIVE INTRAUTERINE GESTATION OF 11 WEEKS 5 DAYS

MATERNAL INTRAMURAL UTERINE FIBROID

(29x26 mm intramural fibroid in anterior myometrium at upper uterine segment)

Repeat scan at 20 weeks

*The above Impression is Differential Diagnosis.

The diagnosis is to be confirmed with other necessary investigations *

1. This is a preliminary report. Further details will be given when all reports are received.
2. Some of the findings may be altered due to technical factors.
3. For definitive diagnosis, the following follow-up scans from 16 weeks are necessary.
4. Confirmation of fetal sex is illegal till 20 weeks after 1994.
5. Some of the findings may not be visible due to technical factors.
6. Repeat scan is suggested for better evaluation.
7. Cardiac and vascular flow may not be visible. For suggested 19A scan for cardiac evaluation.
8. We do not disclose the sex of the fetus to anybody in any manner.
9. This is a preliminary report. Please continue with other necessary investigations. (strictly confidential)
