A Unit of Raghuwanshi Hospital Nagpur.

Name:- Aayushi Sahu	Age - 26 yrs	Reg.No:- 2851
Ref By - Self walk in		Date:- 20-04-2024
Diagnosis - G2P1L1 12 wks		Ind:- Dating Scan

SONOGRAPHY OF GRAVID UTERUS FINDINGS:-

L.M.P.:-26-01-2024

GA by LMP:-12.1wks

EDD USG:-01-11-2024

GA by USG:-12.5wks

EDD USG:-28-10-2024

Single live intrauterine fetus with regular cardiac activity and fetal movements.

Placenta developing posterior reaching os, no sub chorionic haemorrhage in present scan.

Cardiac activity appreciated in fetal pole. Fetal heart rate- 163 bpm, regular.

Cervical length 2.3 cm, internal os closed.

Fetal Biometry:-

CRL	6.62 cm	12.6 wks
BPD	1.96 cm	13.1 wks
AC	5.69 cm	12.4 wks
FL	0.82 cm	12.3 wks

Impression :

Single live intrauterine pregnancy of 12.5 wks with regular cardiac activity, no sub chorionic haemorrhage. Ultrasoni assigned EDD: 28-10-2021

Adv- NT scan & Double marker at 12- 13 wks. With early anomaly screening and estimation of risk of PIH.

This is not an anomaly scan. Anomaly scan is advised to be done from fetal medicine expert. I Dr. Shashikant Raghuwanshi declare that while undergoing ultrasonography/image scanning on patient neither detected nor disclose the sex of foetus to anybody in any manner. All measurements including estimated fetal weight are subject to statistical variations. Not all anomalies can be detected on sonography.
