A Unit of Raghuwanshi Hospital Nagpur.

Name:- Chandrakala Pawar	Age - 26 yrs	Reg.No: 2856-
Ref By - Self walk in		Date:- 20-04-2024
Diagnosis - Primi 13 wks		Ind:- Dating Scan

SONOGRAPHY OF GRAVID UTERUS FINDINGS:-

L.M.P.:- 18-01-2024

GA by LMP:- 13.2wks

EDD USG:- 24-10-2024

GA by USG:- 13.2wks

EDD USG:- 24-10-2024

Single live intrauterine fetus with regular cardiac activity and fetal movements.

Breech presentation, spine posterior.

Placenta developing anterior reaching os, no sub chorionic haemorrhage in present scan.

Cardiac activity appreciated in fetal pole. Fetal heart rate- 151 bpm, regular.

Nuchal thickness 1.75 mm, Nasal bone seen.

A0313596

Fetal Biometry:-

CRL	6.68 cm	13.0 wks
BPD	2.16 cm	13.4wks
AC	7.07 cm	13.5 wks
FL	1.75 cm	13.0 wks

Impression :

Single live intrauterine pregnancy of 13.2 wks with regular cardiac activity, no sub chorionic haemorrhage. Ultrasonic assigned EDD is 24-10-2024 same from LMP

Adv- Double marker at 12- 13 wks. With early anomaly screening and estimation of risk of PIH.

This is not an anomaly scan. Anomaly scan is advised to be done from fetal medicine expert. I Dr. Shashikant Raghuwanshi declare that while undergoing ultrasonography/image scanning on patient neither detected nor disclose the sex of foetus to anybody in any manner. All measurements including estimated fetal weight are subject to statistical variations. Not all anomalies can be detected on sonography.
