

TESLA MRI • MULTI SLICE CT SCAN • COLOR DOPPLER • ULTRASONOGRAPHY
DIGITAL MAMMOGRAPHY • DIGITAL X-RAY • DPG

Patient ID:	169435	Patient Name:	SHESHRAO SONNE
Age:	43 Years	Sex:	M
Referring Physician:	PHOENIX HOSPITAL	Study Date:	10-Apr-2024

MRI CERVICAL SPINE (3TESLA)

INDICATIONS FOR EXAM: - Headache with neck pain

CORRELATIVE IMAGERY: None

TECHNICAL FACTORS:

SAGITTAL - T1 weighted images. AXIAL - T2 weighted images

On PHILIPS ACHIEVA 3 TESLA MULTITRANSMIT SCANNER

Loss of cervical lordosis is noted with straightening.

C4-C5 intervertebral disc shows posterior bulge indenting anterior subarachnoid space causing mild bilateral foraminal narrowing with compression of corresponding nerve roots.

C5-C6 intervertebral disc shows posterior bulge indenting anterior subarachnoid space and abutting over bilateral corresponding nerve roots.

The alignment of the vertebrae is normal.

Vertebral bodies reveal normal signal intensity without any evidence of a focal lesion.

The spinal cord reveals normal signal intensity, without evidence of focal lesion.

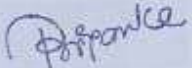

There is no significant compression over the cord.

Cranio-vertebral junction appears normal.

The bony canal is normal. No evidence of narrowing.

IMPRESSION :-

- Loss of cervical lordosis with straightening.
- C4-C5 intervertebral disc shows posterior bulge indenting anterior subarachnoid space causing mild bilateral foraminal narrowing with compression of corresponding nerve roots.
- C5-C6 intervertebral disc shows posterior bulge indenting anterior subarachnoid space and abutting over bilateral corresponding nerve roots.
