

NAME: MRS. DROPATI KHARE

AGE: 34YRS

SEX: FEMALE

REFERRED BY: DR. A. KESHARWANI

DATE: 26.04.2024

OBSTETRIC SCAN FOR FETAL BIOMETRY

LMP: 31.01.2024	GA by LMP: 12 W 2 D	EDD by LMP: 06.11.2024
AGA by USG: 12 Weeks 3 Days +/- 2 Weeks		EDD by USG: 06.11.2024

The real time, B mode sonography of gravid uterus was performed.

- Single well defined gestational sac is seen in the fundus of the uterus.
- Placenta: posterior, Grade 0 maturity. Not low lying.
- Liquor: Adequate (SDP-4.69cm.)
- Good trophoblastic reaction present.
- Single live embryo is seen within the gestational sac.

CRL measures 5.94cms corresponding to	12 Weeks 3 Days
Fetal cardiac activity is present	FHR -160b/min.
EDD by fetal maturity:	06.11.2024

- Both ovaries are normal in size and appearance. No adnexal mass seen.
- Cervical length -Measures 3.05cms. Internal os is closed.

IMPRESSION:

- Single live intrauterine fetus of average gestational age 12 weeks 3 days.
(Advice- Follow up USG)

This scan has been done for general fetal well being and should not be considered as anomaly scan (done for evaluation of fetal structural defect). All measurements including fetal weight are subject to statistical variations, fetal position, amniotic fluid & resolution of the ultrasound machine used for scan. (Fetal cardiac anomalies have to be ruled out by fetal echocardiography).

[I Dr. D. K. Sahu, declare that during USG examination, I have not disclosed sex of the fetus to anybody in any manner.]

Thanks for referral.

Dr. D. K. Sahu

MBBS, DMRD

The science of radiological diagnosis is based on the interpretation of various shadows produced by both the normal and abnormal tissues and is not always conclusive. Further biochemical and radiological investigation and clinical correlation is required to enable the clinician to reach the final diagnosis. The report and films are not valid for medico - legal purpose.
